Steps to ensure your developer unit is not damaged in shipment to Digital Printer Service

We Keep It Printing for you!

Digital Printer Service

"Keep It Printing!"

As you probably already know, the standard packaging of the 8000 dev unit is not the best. Digital Printer Service has designed our own custom shipping box and protective foam end blocks for these units. In order to ensure that your unit arrives to us in the best shape possible there are a couple of things you should do. First, remove all the toner. Second, remove the bracket on the right side of the dev unit that has the small black connector on it. You can allow it to hang loose on the unit. Do not disconnect the wires. (this bracket always gets bent during shipping but it won't if it is not attached).

This is how the package looks when we ship it out of our location. We have had no damaged units to date.

Be sure to insure the package for whatever value you see fit. We recommend at least \$5000.

If you need one of our special shipping boxes sent to you, we will be happy to send an empty one to your location to make shipping your unit easy and safe. Just email your box request to: kiptech@earthlink.net or call 860-395-7942
